Problem

6 years ago

Solved

Hi,

I am trying to set up nodemailer with zoho in my react application. Here is a snippet the code below:

```
`
```

```
const mailOptions = {  
  from: nodeMailerUser,  
  to: email,  
  subject: `Your application for ${brand} account ${accountId} has been submitted`,  
  replyTo: nodeMailerUser,  
  html: applicationSubmit({name: name, brand: brand, accountId: accountId,  
paymentEmail: paymentEmail, date: date, currency: currency, type: typeOfAccount})  
};  
  
const transporter = nodemailer.createTransport({  
  host: 'smtp.zoho.com',  
  port: 465,  
  secure: true, // use SSL  
  auth: {  
    user: nodeMailerUser,  
    pass: nodeMailerPass  
  }  
});
```
